

# Largo Coin (LRG) Mobile Wallet. User Guide

Get instant access to your LRG coins from anywhere with your mobile device right now. With the Largo Coin (LRG) Mobile Wallet, you can send, receive, and store LRG coins.

## Downloading the application

To start using the Largo Coin (LRG) Mobile Wallet, visit either Google Play if you have an Android device or the Apple App Store if you have an iOS device. Depending on the mobile device, select the store with our application:

Android wallet – <https://play.google.com/store/apps/details?id=io.largocoin.app.android>

iOS wallet – <https://apps.apple.com/gb/app/largo-coin/id1488614586>

You can either follow one of these links or find the Largo Coin (LRG) Wallet app using the search forms built into the stores. Download the mobile app to your device. After the installation is complete, you can launch a mobile wallet on it.

## Authorization

When you first launch the mobile wallet, you will get to the login screen.

If you have previously used our LRG web wallet ([web.largocoin.io](http://web.largocoin.io)) and you have an account, you can log in to the application using the credentials that you used in the web wallet.

To do this, enter your email and account password in the corresponding fields. Click Log in. You have successfully logged in!

## Registration

If you do not have an account, you can register it. To do this, on the authorization screen in the application, click Register where you see the text “Don’t have an account yet? Register!”

The registration screen will open where you need to fill in the following data:

- email;
- your password (must be at least 6 characters long);
- password confirmation.

After that, do not forget to read and agree to the privacy policy. To complete the registration of a new account, click Register.

An email will automatically be sent to your email address specified during registration to confirm your registration.

Follow the link in the email to confirm and complete the registration.

Now you can log in to the application and start using your mobile wallet.

## Creating a new crypto wallet

To create a new crypto wallet (unique cryptocurrency address), go to the main screen through the Home tab in the menu. Then:

- if you have an iOS device, click the “+” button located at the top right;
- if you have an Android device, click the “+ Wallet” button.

Upon click on the button, a screen for creating a new wallet will open. Enter the name of the wallet and click Add new wallet. Your crypto wallet has been successfully created!

**Note:** if you have previously used a web wallet, you can log in to the application using the same credentials as for the web wallet. All your wallets already created in that account will automatically appear in the mobile app.

## Sending coins

To send LRG to another cryptocurrency address, do the following:

1. Go to the Transfers screen.
2. If you have multiple wallets, select the wallet from which you want to send coins. If you have only one wallet, then coins will be automatically sent from it.
3. Enter the address to which you are going to transfer coins (carefully check the recipient's address!).
4. Enter the number of LRG to be sent (after that, the total amount that will be withdrawn from your wallet, including the transfer fee, will be shown).

And finally, click Send. Your LRG coins have been sent successfully!

## Transaction history

To view your entire history of transactions of sent and received coins, go to the History screen. It shows your transactions for all time, sorted by date, as well as the sending and receiving addresses along with the amount and time.

If you need detailed information about a transaction, then click on it.

You will see a menu with a list where you can repeat the transfer or add the address to your contacts. And if you click View information, the block explorer will open with detailed information about this transaction.

## **Nickname**

In the application settings, among personal data settings, you can enter a nickname or change its visibility.

Your nickname is displayed to other users when they send coins to your address. When someone enters your wallet address, and your nickname is not hidden in your privacy settings, they will see your nickname below the address.

If you do not want a nickname to be displayed when someone enters your address, then hide its visibility. This can be done with just one click.

## **Switch language**

To change the language in the mobile app, go to the Settings screen. You will find Language in Account settings.

Click Change next to the current application language to open a list of available languages. Select the language you need, and the application will instantly change the language, even without restarting. Done!

## **Two-factor authentication**

Two-factor authentication is a method of identifying a user on a service (usually on the Internet) by requesting two different types of authentication data.

It provides a two-layer, and therefore more effective, account protection against unauthorized access.

To enable two-factor authentication on the mobile app, go to the Settings screen and select two-factor authentication. You can choose between two ways to enable 2FA:

- Scan a QR code.
- Use a secret key.

In both cases, you need an application to use two-factor authentication. We recommend using the official Google Authenticator.

Download and run it on your device.

At the bottom of the screen, click on the "+" icon, then choose a convenient way for you (Scan QR code or Enter the setting key), and follow the instructions of the application.

After successfully entering the 2FA code, our mobile wallet will notify you that 2FA has been successfully activated.

## **PIN**

The PIN is one of the security features of the mobile app on your device. If you use banking apps, then you have known it for a long time.

When the PIN function is active, then if you re-expand the application, you must enter the code you specified to continue using it.

To activate this feature in your mobile wallet, go to the Settings screen and find PIN in your account settings.

Enter 4 digits and click Save. Now, every time you start the application or minimize it, you will need to enter the specified PIN.

## **Still have questions?**

If you still have any questions about using a mobile wallet, then email us at [support@largocoin.io](mailto:support@largocoin.io)
